

socialprotection.org invites agencies, governmental and non-governmental organisations, research centres, think tanks and individuals to discover and share content related to social protection.

Each search allows users to explore content – whether publications, stakeholders, programmes and more – on social protection through a structured framework, or taxonomy. Any member can share content for which they hold the copyrights, or that is freely available to the public, by uploading it to the platform. After the inclusion, all content is revised and moderated by the socialprotection.org team.

content search filters:

The content searches for each feature are designed to source content in the most user-friendly way. Therefore, an initial keyword search is available, complemented by tailored search filters to further refine results:

Social protection programmes

Search for content by social protection programme.

Social protection topics

Search for content on a specific subject related to the design, implementation and monitoring of social protection programmes/policies as well as theoretical and operational approaches to the topic.

Cross-cutting areas

Search for content by social areas/policies that can be affected by social protection strategies or that interact with social protection programmes and policies.

Geographic area

Search for content filtering by countries or regions of interest.

Population groups

Search according to the analysed population group(s).

Author/Publisher type

Search content by the authoring/publishing institution.

Content type

Search in terms of the purpose of the content e.g. case study, impact evaluation etc.

Document type

Search by the format of content, including text, video, slides etc.

Language

Search for content in a particular language.

Year of publication

Search by the year content was published.
